

東芝のAI技術

これまで研究開発を進めてきた
東芝のAI技術をご紹介します。
メディアデータ分析、異常検知などの
カテゴリに分けて
Webサイト上に多数のAI技術を掲載しています。

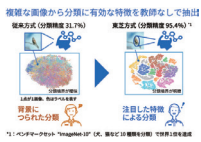

詳しくは
「東芝AI技術カタログ」
Webページから

メディアデータ分析

教師なし画像分類技術IDFD

外観検査において類似した不良の画像を自動分類し、原因追及までの分析時間を短縮します。

運転・制御

電力市場取引最適化

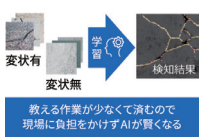

知識整理／言語データ分析

インフラ文書理解技術

異常検知／メディア認識

モデルベース型画像異常検知

音声対話／メディア変換／メディア生成

RECAIUS™の音声合成技術

運転・制御

強化学習を用いた永久磁石同期電動機(PMSM)駆動ロジックの自動構築

運転・制御

環境変化に適合する列車空調操作モデルの自動学習

異常検知／状態推定／メディア認識

画像と点検質問による危険検知技術

配置・設計

深層ニューラルネットワークのスケラブル化技術

メディア認識

音声による作業記録(数値・項目入力)

指標化

品質カード自動作成支援システム

メディアデータ分析／メディア認識

Few-shot物体検出

Toshiba's AI Technologies

Here, we will introduce the AI technologies that Toshiba has researched and developed for many years. A variety of these AI technologies are presented on the website, classified into categories such as media data analysis and anomaly detection.

For details, please refer to the "Toshiba AI Technology Catalog" website.
<https://www.global.toshiba/ww/technology/corporate/ai.html>

<p>Media data analysis</p> <p>Unsupervised image clustering: IDFD</p> <p>Automatically classifying images of similar defects during visual inspections reduces the analyses time required to investigate the causes of defects.</p>	<p>Operation and Control</p> <p>Optimizing electric power market transactions</p> <p>Conduct electric power transactions that maximize profits while taking into account the risks of fluctuations in renewable energy volumes and market prices</p>	<p>Language media analysis/Knowledge organization</p> <p>AI that Understands Infrastructure Documents</p> <p>Unlock the knowledge of skilled workers from technical documents to achieve advanced infrastructure maintenance (e.g., quickly decide troubleshooting methods).</p>
<p>Media recognition/Anomaly detection</p> <p>Model-based image anomaly detection</p> <p>AI that can detect pixel-level specified anomalies (e.g., cracks, rust) by training with images annotated for the existence of anomalies per image</p>	<p>Speech dialogue/Media transformation/Media generation</p> <p>RECAIUS™ speech synthesis technology</p> <p>Improves naturalness and speaker similarity of synthesized voice using a speech synthesis method based on statistical parameter selection.</p>	<p>Operation and Control</p> <p>Automatic construction of PMSM drive logic using reinforcement learning (RL)</p> <p>RL achieves advanced control based on a data-driven approach.</p>
<p>Operation and Control</p> <p>Automated machine learning for train A/C operation models that adapt to changes in the environment</p> <p>This technology helps to provide comfortable spaces on trains in keeping with changes in the environment (e.g., seasonal changes).</p>	<p>Anomaly detection/Status estimation/Media recognition</p> <p>Risk detection based on images and inspection questions</p> <p>Automatically detects risky behaviors or dangerous situations using AI that answers questions about the image.</p>	<p>Placement and Design</p> <p>Scalable technologies for deep neural networks</p> <p>Adjusts AI performance and computational complexity in keeping with the usage environment</p>
<p>Media recognition</p> <p>Work records by speech (figure/item input)</p> <p>Using voice-operated work manual playback and results input, this system allows hands-free work records to be kept quickly and safely.</p>	<p>Indexing</p> <p>AI Quality Card Generation System for Automatically Visualizing AI Quality</p> <p>Automatically creates a quality card summarizing quality info in a convincing, easy-to-understand format.</p>	<p>Media recognition/Media data analysis</p> <p>Few-shot object detection</p> <p>AI detects new objects quickly and easily, by registering just a single image.</p>

The above are just a few examples. Many AI technologies are introduced on the website.
