
Car Parking Tower

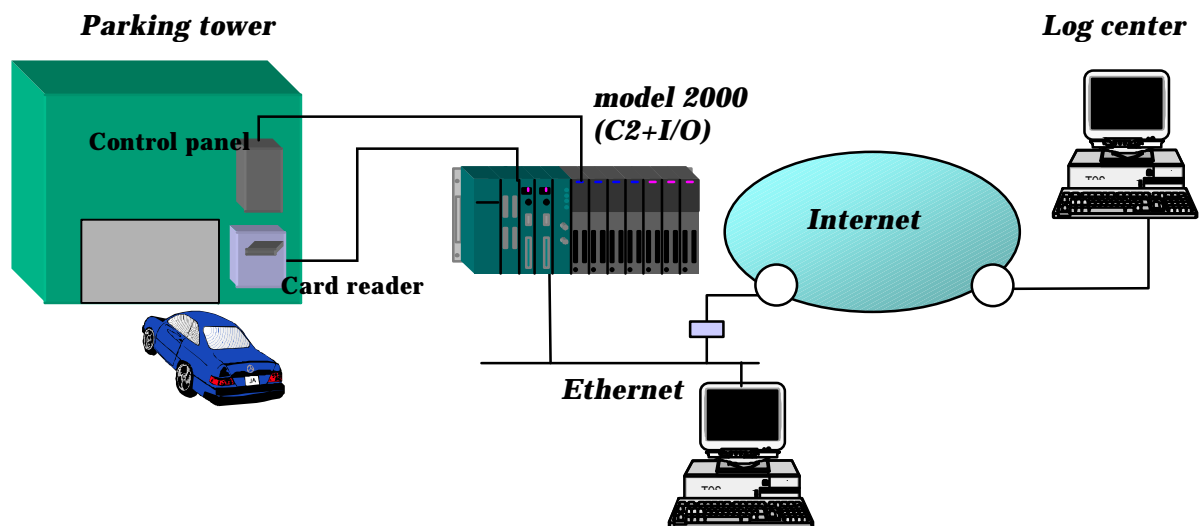

◆ System Overview

An integrated controller is applied to control of the solid parking place for contractors.

C2 reads data of ID card for a parking-place contractor check, and if normal, it will control entering and leaving the garage based on ID data. C2 controls the motor at the time of entering/leaving the garage.

C2 is also possible to communicate with the log center, and to monitor an operation state from remote control center.

◆ System Configuration

◆ Features

- (1) Compact configuration only C2 and I/O.
- (2) The rich interface functions of C2.
- (3) Integration of generalization management of data and control is possible by C2 controller.
